Pedersen AH, Freskgaard PO;

Novel conjugate useful for treating or preventing septic shock, stroke and myocardial infarction, comprises non-polypeptide group covalently attached to protein C polypeptide comprising an attachment group.

Claim 9; Page; 92pp; English

CC polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attached to Ca protein C polypeptide comprising an amino acid sequence which differs C from that of a parent protein C polypeptide (III) in at least one introduced and/or at least one removed amino acid residue comprising an CC attachment group for the non-polypeptide group (e.g. an N-glycosylation CS site). Also included are (1) a variant (IV) of (III) comprising a substitution in a position (P) where (P) is an amino acid with at least CC substitution is not Thr245Ser/Ala/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln, CC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/CC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/CC His/Lys/Arg/Asn/Asp/Glu/Gly/Gln; (2) a nucleotide sequence (V) encoding CC comprising (V) or (VI); (5) increasing (WI) the functional in vivo half-CC life or the serum half-life of a parent protein C polypeptide. The CC conjugates, variants and protein C proteins are useful as medicaments, and in the manufacture of medicaments for the treatment (and contents). diagnosis/prevention) of stroke, myocardial infarction, after venous thrombosis, disseminated intravascular coagulation (DIC), sepsis, septic shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow transplantation, burns, pregnancy, major surgery/trauma or adult respiratory distress syndrome (ARDS). The variant protein C has an increased resistance to activation by e.g. human plasma and alpha-1 antitrypsin. The conjugates have an increased in vivo half-life, increased resistant to inhibitors, reduced The invention relates to a conjugate (I) comprising at least one non-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               renal clearance, reduced immunogenicity and/or increased bioavailability. The conjugate offers a number of advantages over the currently available APC products, including longer duration between injections, administration of less protein, and fewer side effects. Moreover, a reduced anticoagniant activity is beneficial to reduce the risk of bleeding while maintaining the antiinflammatory activity of APC (activated protein C) conjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is located on chromosome 2q13-q14. The present sequence is not shown in the specification but was created by the indexer using the protein C sequence appearing as AAU99002 and the information in claim 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 419 AA;

CC 25% of its side group exposed to the surface, with the provise that the CC substitution is not Thr245Ser/Ala/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln, CC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln; (2) a nucleotide sequence (Y) encoding CC (IY); (3) an expression vector (VI) comprising (Y); (4) a host cell (VII) CC comprising (Y) or (VI); (5) increasing (M2) the functional in vivo half-CC life or the serum half-life of a parent protein C polypeptide. The CC conjugates, variants and protein C proteins are useful as medicaments, CC and in the manufacture of medicaments for the treatment (and Cd diagnosis/prevention) of stroke, myocardial infarction, after venous CC thrombosis, disseminated intravascular coagulation (DIC), sepsis, septic csnock, emboli e.g. pulmonary emboli, transplantation such as bone marrow CC transplantation, burns, pregnancy, major surgery/trauma or adult respiratory distress syndrome (ARDS). The variant protein C has an increased resistance to activation by e.g. human plasma and alpha-1 conjugate strance to activation by e.g. human plasma and alpha-1 confused serum half-life, increased resistant to inhibitors, reduced confused serum half-life, increased resistant to inhibitors, reduced confused serum half-life, increased resistant to inhibitors, reduced confused serum half-life, increased resistant to inhibitors, reduced confused serum half-life, increased resistant to inhibitors, reduced confused on clearance, reduced immunogenicity and/or increased bioavailability. The conjugate protein, and fewer side effects. Noreover, a confused products, including longer duration between injections, administration of less protein, and fewer side effects. Noreover, a confused protein C sequence 2013-9014 the present sequence the risk of bleeding while maintaining the antiinflammatory activity of APC (activated protein C onjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is noted to confuse the confuse of the present sequence is not shown 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 9; Page; 92pp; English

CC polypeptide moiety (II) (e.g. ann A-glycosyl group) covalently attached to compusing an amino acid sequence which differs controduced and/or at least one removed amino acid sequence which differs controduced and/or at least one removed amino acid sequence which differs controduced and/or at least one removed amino acid residue comprising an extrachment group for the non-polypeptide group (e.g. an N-glycosylation consists). Also included are (1) a variant (IV) of (III) comprising an extrachment group for the non-polypeptide group (e.g. an N-glycosylation consists). Also included are (1) a variant (IV) of (III) comprising a consist that the substitution is not thr245ser/Ala/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln, comprising (N) an expression vector (VI) an amino acid with at least consuprising (N) and protein (1) an expression vector (VI) comprising (N) and protein (N) encoding (IV); (3) an expression vector (VI) comprising (N); (4) a host cell (VII) comprising (N) or (VI); (5) increasing (M2) the functional in vivo half-life or the serum half-life of a parent protein C polypeptide. The conjugates, variants and protein C proteins are useful as medicaments, and diagnosis/prevention) of stroke, myocardial infarction, after venous thromosis, disseminated intravascular coagulation (DIC), sepsis, septic conjugates, prepinacy, major surgery/trauma and alpha-1 conjugates, prepinacy, major surgery/trauma and alpha-1 conjugates have an increased in vivo half-life, confugates have an increased in vivo half-life, conjugates have an increased in vivo half-life, conjugates have an increased in vivo half-life, conjugates have an increased in vivo half-life, conjugates have an increased in vivo half-life, conjugates have an increased in vivo half-life, conjugates have an increased in vivo half-life, conjugates have an increased in vivo half-life, conjugates have an increased in vivo half-life, conjugates have an increased in vivo half-life, conjugates have an increased in vivo half-life, conjugates have half-life, more and the pres

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    300
```

Novel conjugate useful for treating or preventing septic shock, stroke and myocardial infarction, comprises non-polypeptide group covalently attached to protein C polypeptide comprising an attachment group.

Claim 9; Page; 92pp; English.

attachment group for the non-polypeptide group (e.g. an N-glycosylation site). Also included are (1) a variant (IV) of [III] comprising a substitution in a position (P) where (P) is an amino acid with at least 25% of its side group exposed to the surface, with the proviso that the substitution is not Th:245Ser/Ala/His/His/Lys/Arg/Asn/Asp/Gly/Gln, Tyr302Ser/Ala/Th:His/Lys/Arg/Asn/Asp/Gly/Gln or Phe316Ser/Ala/Th:His/Lys/Arg/Asn/Asp/Gly/Gln or Phe316Ser/Ala/Th:His/Lys/Arg/Asn/Asp/Gly/Gln; (2) a nucleotide sequence (V) encoding (IV); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) comprising (V); (4) and the serum half-life of a parent protein C polypeptide. The conjugates, variants and protein C proteins are useful as medicaments, and the treatment (via the conjugates). The conjugate offers a number of advantages over the currently available APC products, including longer duration between injections, administration of less protein, and fewer side effects. Moreover, a reduced anticoagulant activity is beneficial to reduce the risk of bleeding while maintaining the antiinflammatory activity of APC (activated protein C) conjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is located on chromosome 2413-614. The present sequence represents a zymogen protein C variant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the protein C sequence appearing as AAU99002 and the information in claim 9 and in the manufacture of medicaments for the treatment (and diagnosis/prevention) of stroke, myocardial infarction, after venous thrombosis, disseminated intravascular coagulation (DIC), sepsis, septic shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow transplantation, burns, pregnancy, major surgery/trauma or adult respiratory distress syndrome (ARDS). The variant protein C has an increased resistance to activation by e.g. human plasma and alpha-1 antitrypsin. The conjugates have an increased in vivo half-life, increased resistant to inhibitors, reduced renal clearance, reduced immunogenicity and/or increased bioavailability. The invention relates to a conjugate (I) comprising at least one non-polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attached to a protein C polypeptide comprising an amino acid sequence which differs from that of a parent protein C polypeptide (III) in at least one introduced and/or at least one removed amino acid residue comprising an Sequence 419 AA;

DR Protein C derivatives, useful for treating vascular occlusive disorder, hypercoagulable state, thrombotic disorder and disease states predisposing thrombosis, comprises specific amino acid substitutions. N-PSDB; AAC83314. WPI; 2001-007227/01. Gerlitz BE, Jones BE; (ELIL ) LILLY & CO ELI.

Claim 5; Page 48-49; 57pp; English

CC The present invention relates to a human protein C derivative. The CC protein is useful for treating vascular occlusive disorders, CC hypercoagulable states such as sepsis, disseminated intravascular (CC coagulation, purpura fulminans, major trauma, major surgery, burns, adult CC respiratory distress syndrome, transplantation, deep vein thrombosis, CC heparin-induced thrombocytopenia, sickle cell disease, thalassemia, viral CC temperine, thrombotic thrombocytopenic purpura, and hemolytic CC uremic syndrome, and also useful for treating thrombotic disorders and CC acute coronary syndromes such as myocardial infarction, unstable angina, CC and stroke, protein C derivatives with amino acid substitutions result in CC increased resistance to inactivation by serpins when compared to wild-CC type activated human protein C. They also have longer half-lives in human CC blood and hence require either less frequent administration and/or smaller dosage than wild type human protein C for treating disorders

cc substitution in a position (F) where (F) is an amino acto with the group exposed to the surface, with the proviso that the CC substitution is not Thr245Ser/Ala/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln, (Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln, (Tyr302Ser/Ala/Thr/CC (Tyr302Ser/Ala/Thr/Asp/Glu/Gly/Gln, (Z) a nucleotide sequence (V) encoding (TV); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) (C) comprising (V); (4) a host cell (VII) (C) comprising (V); (4) a host cell (VII) (C) ife or the serum half-life of a parent protein C polypeptide. The CC injugates, variants and protein C proteins are useful as medicaments, and in the manufacture of medicaments for the treatment (and dagnosis/prevention) of stroke, myocardial infarction, after venous (C shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow (C transplantation, burns, pregnancy, major surgery/trauma or adult (Transplantation) to such a such a such a conjugates have an increased in vivo half-life, conjugates have an increased in vivo half-life, cantitrypsin. The conjugates have an increased in vivo half-life, cantitry such as conjugates over the courrently available (C APC products, including longer duration between injections, administration of less protein, and fewer side effects. Moreover, a ceduced anticoagniant activity is bepteficial to reduce the risk of the conjugate has an extended plasma life. The gene for protein C is a clusted on chromosome 2q13-q14. The present sequence a symogen (C c protein C variant of the invention. Note: The present sequence is not constant of the invention. Note: The present sequence is not constant of the conjugates and ANJ99002 and the information in claim 9 crotein C sequence appearing as ANJ99002 and the information in claim 9 crotein C sequence appearing as ANJ99002 and the information in claim 9 crotein C sequence appearing as ANJ99002 and the information in claim 9 crotein constant of the constant of the constant of the constant of the constant of the constant of the const
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               attachment group for the non-polypeptide group (e.g. an N-glycosylation site). Also included are (1) a variant (IV) of (III) comprising a substitution in a position (P) where (P) is an amino acid with at least
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       polypeptide mojety (II) (e.g. an N-glycosyl group) covalently attached to a protein C polypeptide comprising an amino acid sequence which differs from that of a parent protein C polypeptide (III) in at least one introduced and/or at least one removed amino acid residue comprising an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a conjugate (I) comprising at least one non-

                         polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attached to a protein C polypeptide comprising an amino acid sequence which differs from that of a parent protein C polypeptide (III) in at least one introduced and/or at least one removed amino acid residue comprising an attachment group for the non-polypeptide group (e.g. an N-glycosylation site). Also included are (1) a variant (IV) of (III) comprising a subscitution in a position (P) where (P) is an amino acid with at least 25% of its side group exposed to the surface, with the proviso that the subscitution is not Thr245Ser/Ala/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln, Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln, a mucleotide sequence (V) encoding this/Lys/Arg/Asn/Asp/Glu/Gly/Gln, (2) a mucleotide sequence (V) encoding the provisor of the subscitution of the subscitution of the subscitution is not Thr245Ser/Ala/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln, Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln, a mucleotide sequence (V) encoding the subscitution of the subscitution of the subscitution of the subscitution of the subscitution of the subscitution of the subscitution of the subscitution of the subscitution of the subscitution of the subscitution of the subscitution of the subscitution of the subscitution of the subscitution of the subscitution of the subscitution of the subscitution of the subscitution of the subscitution of the subscitution of the subscitution of the subscitution of the subscitution of the subscitution of the subscitution of the subscitution of the subscitution of the subscitution of the subscitution of the subscitution of the subscitution of the subscitution of the subscitution of the subscitution of the subscitution of the subscitution of the subscitution of the subscitution of the subscitution of the subscitution of the subscitution of the subscitution of the subscitution of the subscitution of the subscitution of the subscitution of the subscitution of the subscitution of the subscitution of the subscitution of the subscitution of t

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The conjugate offers a number of advantages over the currently available APC products, including longer duration between injections, administration of less protein, and fewer side effects. Moreover, a reduced anticoagulant activity is beneficial to reduce the risk of bleeding while maintaining the antiinflammatory activity of APC (activated protein C) conjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is located on chromosome 2c13-q14. The present sequence represents a zymogen protein C variant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the protein C sequence appearing as AAU99002 and the information in claim 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               comprising (V) or (VI); (5) increasing (M2) the functional in vivo half-
life or the serum half-life of a parent protein C polypeptide. The
conjugates, variants and protein C proteins are useful as medicaments,
and in the manufacture of medicaments for the treatment (and
diagnosis/prevention) of stroke, myocardial infarction, after venous
thrombosis, disseminated intravascular coagulation (DIC), sepsis, septic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow transplantation, burns, pregnancy, major surgery/trauma or adult respiratory distress syndrome (ARDS). The variant protein C has an increased resistance to activation by e.g. human plasma and alpha-1 antitrypsin. The conjugates have an increased in vivo half-life, increased serum half-life, increased resistant to inhibitors reduced renal clearance, reduced immunogenicity and/or increased bioavailability.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 419 AA;

Human Protein C zymogen protein mutant T254N/N256S

3222B2B28 Human; Protein C; N-glycosylation; APC; activated protein C; zymogen; serum half-life; chromosome 2q13-q14; stroke; myocardial infarction; after venous thrombosis; disseminated intravascular coagulation; DIC;

```
CC 25% of its side group exposed to the surface, with the proviso that the convergence of its side group exposed to the surface, with the proviso that the CC substitution is not Mhr245Ser/Ala/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln, (2) and the proviso that the CC Tyri02Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln, (2) a nucleotide sequence (V) encoding CC (IV); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) C comprising (V) or (VI); (5) increasing (M2) the functional in vivo half-CC life or the serum half-life of a parent protein C polypeptide. The CC conjugates, variants and protein C proteins are useful as medicaments, and in the manufacture of medicaments for the treatment (and CC diagnosis/prevention) of stroke, myocardial infarction, after venous CC thrombosis, disseminated intravascular coagulation (DIC), sepsis, septic Shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow CC transplantation, burns, pregnancy, major surgery/trauma or adult respiratory distress syndrome (ARDS). The variant protein C has an increased serum half-life, increased in vivo half-life, increased serum half-life, increased in vivo half-life.

CC renal clearance, reduced immunogenicity and/or increased bioavailability. The conjugate offers a number of advantages over the currently available of the conjugate offers and protein of the currently available of the conjugate offers and the currently available of the conjugate offers and the currently available of the conjugate offers and the currently available of the conjugate offers and the currently available of the currently available of the currently available of the currently available of the currently available of the currently available of the currently available of the currently available of the currently available of the currently available of the currently available of the currently available of the currently available of the currently available of the currently available of the currently available of the currently available of the currently avai
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     attachment group for the non-polypeptide group (e.g. an N-glycosylation site). Also included are (1) a variant (IV) of (III) comprising a substitution in a position (P) where (P) is an amino acid with at least
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attached a protein C polypeptide comprising an amino acid sequence which differs from that of a parent protein C polypeptide (III) in at least one
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 9; Page; 92pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel conjugate useful for treating or preventing septic shock, stroke and myocardial infarction, comprises non-polypeptide group covalently attached to protein C polypeptide comprising an attachment group.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     WPI; 2002-489875/52.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           18-CCT-2000; 2000DK-00001560.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       administration of less protein, and fewer side effects. Moreover, a reduced anticoagulant activity is beneficial to reduce the risk of bleeding while maintaining the antiinflammatory activity of APC (activated protein C) conjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is located on chromosome 2qi3-qi4. The present sequence represents a zymogen protein C variant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the protein C sequence appearing as AAU99002 and the information in claim 9

Controduced and/or at least one removed amino acid residue comprising an catachment group for the non-polypeptide group (e.g. an N-glycosylation (c) site). Also included are (1) a variant (IV) of (III) comprising an constitution in a position (P) where (P) is an amino acid with at least (25% of its side group exposed to the surface, with the proviso that the substitution is not Thr245Ser/Ala/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln, (2) an incleotide sequence (V) encoding (C) [IV; (3) an expression vector (VI) comprising (V); (4) a host cell (VII) comprising (V) or (VI); (5) increasing (M2) the functional in vivo half-cell (VII) comprising (V) or (VI); (5) increasing (M2) the functional in vivo half-cell (VII) comprising (V); (4) a host cell (VII) comprising (V); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) comprising (V); (4) a host cell (VII) comprising (V); (4) a host cell (VII) comprising (V); (4) a host cell (VII) comprising (V); (4) a host cell (VII) comprising (V); (4) a host cell (VII) comprising (V); (4) a host cell (VII) comprising (V); (4) a host cell (VII) comprising (V); (4) a host cell (VII) comprising (V); (4) a host cell (VII) comprising (V); (4) a host cell (VII) comprising (V); (4) a host cell (VII) comprising (V); (4) a host cell (VII) comprising (V); (4) a host cell (VII) comprising (V); (4) a host cell (VII) comprising (V); (4) a host cell (VII) comprising (V); (4) a host cell (VII) comprising (V); (4) a host cell (VII) comprising (V); (4) a host cell (VII) comprising (V); (4) a host cell (VII) comprising (V); (4) a host cell (VII) comprising (V); (4) a host cell (VII) comprising (V); (4) a host cell (VII) comprising (V); (4) a host cell (VII) comprising (V); (4) a host cell (VII) comprising (V); (4) a host cell (VII) comprising (V); (4) a host cell (VII) cell (VII); (4) a host cell (VII); (4) a host cell (VII); (4) a host cell (VII); (4) a host cell (VII); (4) a host cell (VII); (4) a host cell (VII); (4) a host cell (VII); (4) a host cell (VII); (4) a host cell (VII); (4) a 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a conjugate (I) comprising at least one non-polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attached to a protein C polypeptide comprising an amino acid sequence which differs from that of a parent protein C polypeptide (III) in at least one introduced and/or at least one removed amino acid residue comprising an
Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Movel conjugate useful for treating or preventing septic shock, stroke and myocardial infarction, comprises non-polypeptide group covalently attached to protein C polypeptide comprising an attachment group.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Misc-difference
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 9; Page; 92pp; English.

```
polypeptide molety (II) (e.g. an N-glycosyl group) covalently attached to a protein c polypeptide comprising an amino acid sequence which differs c from that of a parent protein C polypeptide (III) in at least one introduced and/or at least one removed amino acid residue comprising an attachment group for the non-polypeptide group (e.g. an N-glycosylation controduced and/or at least one removed amino acid residue comprising an attachment group for the non-polypeptide group (e.g. an N-glycosylation control of the surface, with the proviso that the substitution in a position (P) where (P) is an amino acid with at least control of the surface, with the proviso that the constitution is not flnr245Ser/Ala/His/Iys/Arg/Asn/Asp/Glu/Gly/Gln, (2) an substitution is not flnr245Ser/Ala/His/Iys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/CC Tyr302Ser/Ala/Thr/His/Iys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/CC His/Iys/Arg/Asn/Asp/Glu/Gly/Gln; (2) a nucleotide sequence (V) encoding (CIV); (3) an expression vector (V) comprising (V); (4) a host cell (VII) comprising (V) or (VII); (5) increasing (M2) the functional in vivo half-cc infe or the serum half-life of a parent protein c polypeptide. The conjugates, variants and protein C proteins are useful as medicaments, cand in the manufacture of medicaments for the treatment (and diamosis/nrevention) of stroke, myocardial inferretion after vectors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             diagnosis/prevention) of stroke, myocardial infarction, after venous
thrombosis, disseminated intravascular coagulation (DIC), sepsis, septic
shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow
transplantation, burns, pregnancy, major surgery/trauma or adult
respiratory distress syndrome (ARDS). The variant protein C has an
increased resistance to activation by e.g. human plasma and alpha-1
antitrypsin. The conjugates have an increased in vivo half-life,
increased serum half-life, increased in vivo half-life.
increased serum half-life, increased resistant to inhibitors, reduced
renal clearance, reduced immunogenicity and/or increased bioavailability.
The conjugate offers a number of advantages over the currently available
APC products, including longer duration between injections,
administration of less protein, and fewer side effects. Moreover, a
ceduced anticoagulant activity is beneficial to reduce the risk of
bleeding while maintaining the antiinflammatory activity of APC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches

This must be especially important when the conjugate has an extended plasma life. The gene for protein C is located on chromosome 2g13-g14. The present sequence represents a zymogen protein C variant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the protein C sequence appearing as AAU99002 and the information in claim 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Local Similarity

g

cc polypeptide molety (II) (e.g. an N-glycosyl group) covalently attached to ca protein C polypeptide comprising an amino acid sequence which differs cc from that of a parent protein C polypeptide (III) in at least one cintroduced and/or at least one removed amino acid residue comprising an attachment group for the non-polypeptide group (e.g. an N-glycosylation cc site). Also included are (1) a variant (IV) of (III) comprising a cc substitution in a position (P) where (P) is an amino acid with at least cc substitution is not Thr245Ser/Ala/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln, cc substitution is not Thr245Ser/Ala/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln, cc substitution is not Thr245Ser/Ala/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln, cc Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln; (2) a mucleotide sequence (V) encoding cc His/Lys/Arg/Asn/Asp/Glu/Gly/Gln; (2) a mucleotide sequence (V) encoding cc (IV); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) cc comprising (V); (5) increasing (M2) the functional in vivo half-cc life or the serum half-life of a parent protein C polypeptide. Claim

9; Page; 92pp; English.

Novel conjugate useful for treating or preventing septic shock, stroke and myocardial infarction, comprises non-polypeptide group covalently attached to protein C polypeptide comprising an attachment group.

The invention relates to a conjugate (I) comprising at least one non-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 increased serum half-life, increased resistant to inhibitors, reduced renal clearance, reduced immunogenicity and/or increased bioavailability. The conjugate offers a number of advantages over the currently available APC products, including longer duration between injections, administration of less protein, and fewer side effects. Moreover, a reduced anticoagniant activity is beneficial to reduce the risk of bleeding while maintaining the antihiflammatory activity of APC (activated protein C) conjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is located on chromosome 2q13-q14. The present sequence represents a zymogen protein C variant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              conjugates, variants and protein C proteins are useful as medicaments, and in the manufacture of medicaments for the treatment (and diagnosis/prevention) of stroke, myocardial infarction, after venous thrombosis, disseminated intravascular coagulation (DIC), sepsis, septic shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow transplantation, burns, pregnancy, major surgery/trauma or adult respiratory distress syndrome (ARDS). The variant protein C has an increased resistance to activation by e.g. human plasma and alpha-1 antitrypsin. The conjugates have an increased in vivo half-life, increased serum half-life, increased resistant to inhibitors, reduced increased serum half-life, increased resistant to inhibitors, reduced
                                                                                                                                              Human Protein C zymogen protein mutant V334N/S336T
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 419 AA;

PR PR PR PR PR PR PR PR PR

Novel conjugate useful for treating or preventing septic shock, stroke and myocardial infarction, comprises non-polypeptide group covalently attached to protein C polypeptide comprising an attachment group.

Claim 9; Page; 92pp; English.

CC from that of a parent protein (2 no) gape and annual sequence which date of a parent protein (2 no) and sequence which date of a parent protein (2 no) in at least one canonic (2 attachment group for the non-polypeptide group (e.g. an N-glycosylation (2 site). Also included are (1) a variant (IV) of (III) comprising a substitution in a position (P) where (P) is an amino acid with at least (2 25% of its side group exposed to the surface, with the proviso that the cubstitution is not Thr245ser/Ala/His/Iys/Arg/Asn/Asp/Glu/Gly/Gln (IV) (2 Ty302ser/Ala/Thr/His/Iys/Arg/Asn/Asp/Glu/Gly/Gln; (2) a nucleotide sequence (V) encoding (IV); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) (2 comprising (V)) or (VI); (5) increasing (N2) the functional in vivo half-conjugates, variants and protein C protein are useful as medicaments, (2 and in the manufacture of medicaments for the treatment (and conjugates, variants and protein C proteins are useful as medicaments, (2 and in the manufacture of medicaments for the treatment (and conjugates) prevention) of stroke, myocardial infarction, after venous (2 thrombosis, disseminated intravascular coagulation such as bone marrow (2 transplantation, burns, pregnancy, major surgery/trauma or adult (2 increased resistance to activation by e.g. human plasma and alpha-1 (2 cantitrypsin. The conjugates have an increased in vivo half-life, increased in vivo half-life, increased is number of advantages over the currently available (2 administration of less protein, and fewer side effects. Moreover, a deministration of less protein, and fewer side effects. Moreover, a The invention relates to a conjugate (1) comprising at least one non-polypeptide molety (II) (e.g. an N-glycosyl group) covalently attached a protein C polypeptide comprising an amino acid sequence which differs reduced anticoagulant activity is beneficial to reduce the risk of ç

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 bleeding while maintaining the antiinflammatory activity of APC (activated protein C) conjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is located on chromosome 2q13-q14. The present sequence represents a zymogen protein C variant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the protein C sequence appearing as AAU99002 and the information in claim 9

CC 25% of its side group exposed to the surface, with the proviso that the substitution is not Thr245Ser/Ala/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln,

CC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/

CC His/Lys/Arg/Asn/Asp/Glu/Gly/Gln; (2) a nucleotide sequence (v) encoding (IV); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) (comprising (V)); (5) increasing (V2) the functional in vivo half-

CC conjugates, variants and protein C proteins are useful as medicaments, conjugates, variants and protein C proteins are useful as medicaments, conjugates, emboli e.g. pulmonary emboli, transplantation such as bone marrow concreased resistance to activation by e.g. human plasma and alpha-1 cantitypsin. The conjugates have an increased in vivo half-life, increased resistance to activation by e.g. human plasma and alpha-1 caminated serum half-life, increased resistant to inhibitors, reduced conjugates have an increased in vivo half-life, increased resistant to inhibitors, reduced conjugates have an increased in vivo half-life, increased resistant to inhibitors, reduced conjugates have an increased in vivo half-life, increased protein conjugates have an increased in vivo half-life, administration of less protein, and fewer side effects. Moreover, a cadministration of less protein, and fewer side effects. Moreover, a reduced anticoagulant activity is beneficial to reduce the risk of bleeding while maintaining the antiinflammatory activity important when the conjugate has an extended plasma life. The gene for protein C is chown in the specification but was created by the indexer using the conjugate appearing as ANU99002 and the information in claim 9 the protein C sequence appearing as ANU99002 and the information in claim 9 the protein C leamn in claim 9 the protein C sequence appearing as ANU99002 and the information in claim 9 to the protein C leamn claim 9 the protein C leamn claim 9 the protein C leamn claim 9 the protein C leamn claim 9 the protein C leamn claim 9 the protein C lea
                                           attachment group for the non-polypeptide group (e.g. an N-glycosylation site). Also included are (1) a variant (IV) of (III) comprising a substitution in a position (P) where (P) is an amino acid with at least
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel conjugate useful for treating or preventing septic shock, stroke and myocardial infarction, comprises non-polypeptide group covalently attached to protein C polypeptide comprising an attachment group.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 18-OCT-2000; 2000US-0242268P

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              increased serum half-life, increased resistant to inhibitors, reduced renal clearance, reduced immunogenicity and/or increased bioavailability. The conjugate offers a number of advantages over the currently available APC products, including longer duration between injections, administration of less protein, and fewer side effects. Moreover, a reduced anticoagulant activity is beneficial to reduce the risk of bleeding while maintaining the antiinflammatory activity of APC (activated protein C) conjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is located on chromosome 2q13-q14. The present sequence is not shown in the specification but was created by the indexer using the protein C sequence appearing as AAU99002 and the information in claim 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             transplantation, burns, pregnancy, major surgery/traums or adult respiratory distress syndrome (ARDS). The variant protein C has an increased resistance to activation by e.g. human plasma and alpha-l antitrypsin. The conjugates have an increased in vivo half-life, intrypsin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 419 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             antitrypsin. attachment group for the non-polypeptide group (e.g. an N-glycosylation site). Also included are (1) a variant (IV) of (III) comprising a substitution in a position (P) where (P) is an amino acid with at least 25% of its side group exposed to the surface, with the proviso that the substitution is not fhr24Ser/Ala/His/Lys/Arg/Asm/Asp/Glu/Gly/Gln or Ph23Ger/Ala/Thr/Firs/Arg/Asm/Asp/Glu/Gly/Gln; (2) a nucleotide sequence (V) encoding (IV); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) comprising (V) or the serum half-life of a parent protein c polypeptide. The conjugates, variants and protein c proteins are useful as medicaments, and in the manufacture of medicaments for the textent (1).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; Protein C; N-glycosylation; APC; activated protein C; zymogen; serum half-life; chromosome 2q13-q14; stroke; myocardial infarction; after venous thrombosis; disseminated intravascular coagulation; DIC;
                                                                                                                                                                                                                  The invention relates to a conjugate (I) comprising at least one non-polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attached to polypeptide comprising an amino acid sequence which differs from that of a parent protein C polypeptide (III) in at least one introduced and/or at least one removed amino acid residue comprising an
                                                                                                                                                                                                                                                                                                                                                                  Novel conjugate useful for treating or preventing septic shock, stroke and myocardial infarction, comprises non-polypeptide group covalently attached to protein C polypeptide comprising an attachment group.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Misc-difference 220

The variant protein C has an increased resistance to activation by e.g. human plasma and alphal contrained the conjugates have an increased in vivo half-life, increased resistant to inhibitors, reduced contrained the conjugates have an increased in vivo half-life. The conjugate offers a number of advantages over the currently available conjugate offers a number of advantages over the currently available. The products, including longer duration between injections, administration of less protein, and fewer side effects. Moreover, a reduced anticoagulant activity is beneficial to reduce the risk of bleeding while maintaining the antiinflammatory activity of APC (activated protein C) conjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is located on chromosome 2413-914. The present sequence represents a zymogen protein C variant of the invention. Note: The presents a zymogen contained the protein contained the protein contained the protein contained the protein contained the protein contained the protein contained the protein contained the protein contained the protein contained the protein contained the protein contained the protein contained the protein contained the protein contained the protein contained the protein contained the protein contained the protein contained the protein contained the protein contained the protein contained the protein contained the protein contained the protein contained the protein contained the protein contained the protein contained the protein contained the protein contained the protein contained the protein contained the protein contained the protein contained the protein contained the protein contained the protein contained the protein contained the protein contained the protein contained the protein contained the

Human Protein C zymogen protein mutant R306N/K308S

Human; Protein C; N-glycosylation; APC; activated protein C; zymogen; serum half-life; chromosome 2q13-q14; stroke; myocardial infarction; after venous thrombosis; disseminated intravascular coagulation; DIC; sepsis; septic shock; embolism; pulmonary embolism; burn; pregnancy; bone marrow transplantation; major surgery; trauma; ARDS; coagulant; adult respiratory distress syndrome; alpha-1 antitrypsin; mutant; mutein.

```
ctatachment group for the non-polypoptide group (e.g. an M-glycosylation coste). Also included are (1) a variant [IV] of [II] comprising a substitution in a position (P) where (P) is an amino acid with at least C2 5% of its side group exposed to the surface, with the provise that the C2 5% of its side group exposed to the surface, with the provise that the C2 5% of its side group exposed to the surface, with the provise that the C3 5% of its side group exposed to the surface, with the provise that the C2 5% of its side group exposed to the surface, with the provise that the C3 5% of its side group exposed to the surface, with the provise that the C4 5% of its side group exposed to the surface, with the provise that the C4 5% of its side group exposed to the surface, with the provise that the cC4 fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fill of the fil
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                18-OCT-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             the conjugate has an extended plasma life. The gene for protein C is located on chromosome 2q13-q14. The present sequence represents a zymogen protein C variant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the protein C sequence appearing as AAU99002 and the information in claim 9
                                  Human Protein C zymogen protein mutant E309N/K311S.

                                                                                                                                                                                           diagnosis/prevention) of stroke, myocardial infarction, after venous chrombosis, disseminated intravascular coagulation (DIC), sepsis, septic shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow cransplantation, burns, pregnancy, major surgery/trauma or adult respiratory distress syndrome (ARDS). The variant protein C has an increased resistance to activation by e.g. human plasma and alpha-1 complete and the conjugates have an increased in vivo half-life, increased resistant to inhibitors, reduced crenal clearance, reduced immunogenicity and/or increased bioavailability. The conjugate offers a number of advantages over the currently available cadministration of less protein, and fewer side effects. Moreover, a composite activity is beneficial to reduce the risk of bleeding while maintaining the antifilammatory activity important when the conjugate has an extended plasma life. The gene for protein C is coaded on chromosome 2013-914. The present sequence represents a zymogen composition of the specification but was created by the indexer using the protein C sequence appearing as AAU99002 and the information in claim 9 xxx
                                                                                               Matches
                                                                                                                                      Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         substitution in a position (P) where (P) is an amino acid with at least 52% of its side group exposed to the surface, with the proviso that the substitution is not Thr24Ser/Ala/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln, Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln; (2) a nucleotide sequence (V) encoding (IV); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) comprising (V) or (VI); (5) increasing (M2) the functional in vivo half-life or the serum half-life of a parent protein C polypeptide. The conjugates, variants and protein C proteins are useful as medicaments, and in the manufacture of medicaments for the treatment (and
                                                                                                                                                                                      Sequence 419
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         introduced and/or at least one removed amino acid residue comprising an attachment group for the non-polypeptide group (e.g. an N-glycosylation site). Also included are (1) a variant (IV) of (III) comprising a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attached to a protein C polypeptide comprising an amino acid sequence which differs from that of a parent protein C polypeptide (III) in at least one introduced and/or at least one removed amino acid residue comprising an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a conjugate (I) comprising at least one non-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel conjugate useful for treating or preventing septic shock, stroke and myocardial infarction, comprises non-polypeptide group covalently attached to protein C polypeptide comprising an attachment group.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel conjugate useful for and myocardial infarction,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 25% of its side group exposed to the surface, with the provise that the substitution is not Thr245Ser/Ala/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln, Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln, C) a nucleotide sequence (V) encoding (IV); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) (COMPRISING (V) or (VI); (5) increasing (M2) the functional in vivo half-life or the serum half-life of a parent protein C polypeptide. The conjugates, variants and protein C proteins are useful as medicaments, and in the manufacture of medicaments for the treatment (and diagnosis/prevention) of stroke, myocardial infarction, after venous thrombosis, disseminated intravascular coagglation (DIC), sepsis, septic chock embol's or "milmonary embol's transfirm and the protein of the conjugates."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attached to a protein C polypeptide comprising an amino acid sequence which differs from that of a parent protein C polypeptide (III) in at least one introduced and/or at least one removed amino acid residue comprising an attachment group for the non-polypeptide group (e.g. an N-glycosylation site). Also included are (I) a variant (IV) of (III) comprising a substitution in a position (P) where (P) is an amino acid with at least
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           transplantation, burns, pregnancy, major surgery/trauma or adult respiratory distress syndrome (ARDS). The variant protein C has an increased resistance to activation by e.g. human plasma and alpha-1 antitrypsin. The conjugates have an increased in vivo half-life, increased serum half-life, increased resistant to inhibitors, reduced renal clearance, reduced immunogenicity and/or increased bioavailability.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 419 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                located on chromosome 2q13-q14. The present sequence represents a zymogen protein C variant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the protein C sequence appearing as AAU99002 and the information in claim 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    reduced anticoagulant activity is beneficial to reduce the risk of bleeding while maintaining the antiinflammatory activity of APC (activated protein C) conjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The conjugate offers a number of advantages over the currently available APC products, including longer duration between injections, administration of less protein, and fewer side effects. Moreover, a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 9; Page; 92pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel conjugate useful for treating or preventing septic shock, stroke and myocardial infarction, comprises non-polypeptide group covalently attached to protein C polypeptide comprising an attachment group.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           polypeptide moiety (II) (e.g. an N-alument)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            당
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CC His/Lys/Arg/Asn/Asp/Glu/Gly/Gln; (2) a nucleotide sequence (V) encoding (VI); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) (2) comprising (V) or (VII); (5) increasing (W2) the functional in vivo half-comprising (V) or (VII); (5) increasing (M2) the functional in vivo half-comprising (V) or (VII); (5) increasing (M2) the functional in vivo half-comprising (V) or (VII); (5) increasing (M2) the functional in vivo half-life or the serum half-life of a parent protein C polymeptide. The conjugates have an increased in vivo half-life, increased resistance transplantation (DIC), sepsis, septic concepts of the conjugates have an increased in vivo half-life.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      APC products, including longer duration between injections, administration of less protein, and fewer side effects. Moreover, a reduced anticoagulant activity is beneficial to reduce the risk of bleeding while maintaining the antiinflammatory activity of APC (activated protein C) conjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is located on chromosome 2q13-q14. The present sequence represents a zymogen protein C variant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the protein C sequence appearing as AAU99002 and the information in claim 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           attachment group for the non-polypeptide group (e.g. an N-glycosylation site). Also included are (1) a variant (IV) of (III) comprising a substitution in a position (P) where (P) is an amino acid with at least
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 419 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           remal clearance, reduced immunogenicity and/or increased bioavailability. The conjugate offers a number of advantages over the currently available
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               25% of its side group exposed to the surface, with the proviso that the substitution is not Thr245Ser/Ala/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln,

Novel conjugate useful for treating or preventing septic shock, stroke and myocardial infarction, comprises non-polypeptide group covalently attached to protein C polypeptide comprising an attachment group.

Claim 9; Page; 92pp; English.

CC The invention relates to a conjugate (I) comprising at least one nonCC polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attached to
CC a protein C polypeptide comprising an amino acid sequence which differs
CC from that of a parent protein C polypeptide (III) in at least one
CC introduced and/or at least one removed amino acid residue comprising an
CC attachment group for the non-polypeptide group (e.g. an N-glycosylation
CC site). Also included are (1) a variant (IV) of (III) comprising a
CC substitution in a position (P) where (P) is an amino acid with at least
CC substitution is not Thr24Ser/Ala/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln,
CC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/
CC His/Lys/Arg/Asn/Asp/Glu/Gly/Gln; (2) a nucleotide sequence (V) encoding
CC (IV); (3) an expression vector (VI) comprising (V); (4) a bost cell (VII)
CC comprising (V) or (VI); (5) increasing (M2) the functional in vivo halfCC (Iife or the serum half-life of a parent protein C polypeptide. The
CC conjugates, variants and protein C proteins are useful as medicaments,
CC and in the manufacture of medicaments for the treatment (and
CC diagnosis/prevention) of stroke, myocardial infarction, after venous
CC thrombosis, disseminated intravascular coagulation (DIC), sepsis, septic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Shock, emboli e.g. pulmonary emboli, transplantation such as hone marrow contransplantation, burns, pregnancy, major surgery/trauma or adult respiratory distress syndrome (ARDS). The variant protein C has an contract of antitrypsin. The conjugates have an increased in vivo half-life, increased serum half-life, increased resistant to inhibitors, reduced contract of the conjugate offers a number of advantages over the currently available confluence, including longer duration between injections, and the products, including longer duration between injections of less protein, and fewer side effects. Moreover, a confluence anticoagulant activity is beneficial to reduce the risk of bleeding while maintaining the antihinflammatory activity important when conjugate has an extended plasma life. The gene for protein C is located on chromosome 2q13-q14. The present sequence represents a zymogen contract of the conjugate has an extended plasma life. The presents a zymogen contract of the invention. Note: The presents a zymogen control of the specification but was created by the indexer using the protein C sequence appearing as AAU99002 and the information in claim 9 very
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches 417;

```

Novel conjugate useful for treating or preventing septic shock, stroke and myocardial infarction, comprises non-polypeptide group covalently attached to protein C polypeptide comprising an attachment group.

Claim 9; Page; 92pp; English.

diagnosis/prevention) of stroke, myocardial infarction, after venous thrombosis, disseminated intravascular coagulation (DIC), sepsis, septic shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow transplantation, burns, pregnancy, major surgery/trauma or adult respiratory distress syndrome (ARDS). The variant protein C has an increased resistance to activation by e.g. human plasma and alpha-1 cincreased serum half-life, increased in vivo half-life, increased serum half-life, increased resistant to inhibitors, reduced crenal clearance, reduced immunogenicity and/or increased bioavailability. The conjugate offers a number of advantages over the currently available cadministration of less protein, and fewer side effects. Moreover, a cadministration of less protein, and fewer side effects Moreover, a reduced anticoagulant activity is beneficial to reduce the risk of bleeding while maintaining the antinflammatory activity of all conjugate has an extended plasma life. The gene for protein C is located on chromosome 2q13-q14. The present sequence represents a zymogem introduced and/or at least one removed amino acid residue comprising an cattachment group for the non-polypeptide group (e.g. an N-glycosylation cattachment group for the non-polypeptide group (e.g. an N-glycosylation cattachment group for the non-polypeptide group (e.g. an N-glycosylation cattachment group for the non-polypeptide group (e.g. an N-glycosylation cattachment group are possible to the surface, with the provising a substitution in a position (P) where (P) is an amino acid with at least cat for the surface, with the proviso that the substitution is not Thr24Ser/Ala/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln, CTyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln; (2) a nucleotide sequence (V) encoding CTyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln; (2) a nucleotide sequence (V) encoding CTV); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) comprising (V) or (VI); (5) increasing (V); the functional in vivo half-composition (VI); (5) increasing (V); the functional in vivo half-composition (VI); (S) increasing (VI); (A) an expression vector (VI); (B) increasing (VI); (A) an expression vector (VI); (B) increasing (VI); (B) increasing (VI); (A) an expression vector (VI); (B) increasing (VI); polypeptide moiety (II) (e.g. an N-glycosyl group) a protein C polypeptide comprising an amino acid s from that of a parent protein C polypeptide (III) in at least one The invention relates to a conjugate (I) comprising at least one nonsequence which differs covalently attached to

                          CC increased resistance to activation by e.g. human plasma and alpha-1 CC antitypsin. The conjugates have an increased in vivo half-life, increased in vivo half-life increased serum half-life, increased in resistant to inhibitors, reduced concerned the conjugate offers a number of advantages over the currently available conjugate offers a number of advantages over the currently available conformation of less protein, and fewer side effects Moreover, a reduced anticoagulant activity is beneficial to reduce the risk of the conjugate has an extended plasma life. The gene for protein C is conjugate has an extended plasma life. The gene for protein C is coated on chromosome 2q13-q14. The present sequence represents a zymogen content C variant of the invention. Note: The present sequence is not shown in the specification but was created by the information in claim 9 correctin C sequence appearing as AAU99002 and the information in claim 9

CC Hys102ser/Ala/Thr/His/Lys/Arg/Ash/Asp/Glu/Gly/Gln, (2) a nucleotide sequence (V) encoding (CC His/Lys/Arg/Ash/Asp/Glu/Gly/Gln, (2) a nucleotide sequence (V) encoding (C (IV); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) (CC comprising (V) or (VI); (5) increasing (M2) the functional in vivo half-C comprising (V) or (VI); (5) increasing (M2) the functional in vivo half-C comprising (V) or (VI); (5) increasing (M2) the functional in vivo half-C conjugates, variants and protein C protein C polypeptide. The conjugates, wariants and protein C protein are useful as medicaments, and increasing (M2) the functional in vivo half-C conjugates, pregnancy myocardial infarction, after venous conformation, burns, pregnancy, major surgery/trauma or adult transplantation, burns, pregnancy, major surgery/trauma or adult respiratory distress syndrome (ARDS). The variant protein C has an increased resistance to activation by e.g. human plasma and alpha-1 conjugates have an increased in vivo half-life, increased resistant to inhibitors, reduced conjugate offers a number of advantages over the currently available. The products, including longer duration between injections, reduced immunogenicity and/or increased bloavailability. The products, including the antihifilammatory activity of APC products, including the antihifilammatory activity of APC captivated protein C onjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is shown in the specification but was created by the indexer using the protein C sequence appearing as AAU99002 and the information in claim 9 to the protein C sequence appearing as AAU99002 and the information in claim 9 to the protein C sequence appearing as AAU99002 and the information in claim 9 to the protein C sequence appearing as AAU99002 and the information in claim 9 to the protein C sequence is protein C sequence is not protein C sequence is not protein C sequence is not protein C sequence is not protein C sequence is no
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a conjugate (I) comprising at least one non-polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attached to a protein C polypeptide comprising an amino acid sequence which differs from that of a parent protein C polypeptide (III) in at least one introduced and/or at least one removed amino acid residue comprising an attachment group for the non-polypeptide group (e.g. an N-glycosylation site). Also included are (I) a variant (IV) of (III) comprising a substitution in a position (P) where (P) is an amino acid with at least 25% of its side group exposed to the surface, with the proviso that the substitution is not Thr245ser/Ala/His/Lys/Arg/Aan/Aap/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Gly/Glu/Glu/Glu/G
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel conjugate useful for treating or preventing septic shock, stroke and myocardial infarction, comprises non-polypeptide group covalently attached to protein C polypeptide comprising an attachment group.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 9; Page; 92pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CC substitution in a position (P) where (P) is an amino acid with at least C25% of its side group exposed to the surface, with the proviso that the csubstitution is not Thr245Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln, Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe315Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe315Ser/Ala/Thr/CC (P) and the sequence (V) encoding (V); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) (Comprising (V) or (VI); (5) increasing (M2) the functional in vivo half-CC (1ife or the serum half-life of a parent protein C polypeptide. The CC conjugates, variants and protein C proteins are useful as medicaments, CC and in the manufacture of medicaments for the treatment (and diagnosis/prevention) of stroke, myocardial infarction, after venous (CC thrombosis, disseminated intravascular coagulation (DIC), sepsis, septic shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow (CC trespiratory distress syndrome (ARDS). The variant protein C has an increased resistance to activation by e.g. human plaema and alpha-1 (CC increased serum half-life, increased resistant to inhibitors, reduced crenal clearance, reduced immunogenicity and/or increased bioavailability. The conjugate offers a number of advantages over the currently available (CC APC products, including longer duration between injections, administration of less protein, and fewer side effects. Moreover, a cadivated protein C onjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is cover the invention but was created by the indexer using the cc shown in the specification but was created by the indexer using the cc shown in the specification but was created by the indexer using the cc shown in the specification but was created by the infermation in claim 9 to the conjugate appearing as AAU99002 and the information in claim 9 to the conjugate place in the created by the infermation in claim 9 to the conjugate place in the conjugate p

attachment group for the non-polypeptide group (e.g. an N-glycosylation site). Also included are (1) a variant (IV) of (III) comprising a substitution in a position (P) where (P) its an amino acid with at least 55% of its side group exposed to the surface, with the proviso that the substitution is not fhr245Ser/Ala/His/Iys/Arg/Asn/Asp/Glu/Gly/Gln, Tyr302Ser/Ala/Thr/His/Iys/Arg/Asn/Asp/Glu/Gly/Gln; (2) a nucleotide sequence (V) encoding (IV); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) comprising (V) or (VII); (5) increasing (M2) the functional in vivo half-life or the serum half-life of a parent protein C polypeptide. The conjugates, variants and protein C proteins are useful as medicaments, and in the manufacture of medicaments for the treatment (and discovered the server of medicaments for the treatment (and discovered the server of medicaments for the treatment (and discovered the server of medicaments for the treatment (and discovered the server of medicaments for the treatment (and discovered the server of medicaments).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Misc-difference
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attached to a protein C polypeptide comprising an amino acid sequence which differs from that of a parent protein C polypeptide (III) in at least one introduced and/or at least one removed amino acid residue comprising an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; Protein C; N-glycosylation; APC; activated protein C; zymogen; serum half-life; chromosome 2g13-g14; stroke; myocardial infarction; after venous thrombosis; disseminated intravascular coagulation, DIC;
thrombosis, disseminated intravascular coagulation (DIC), sepsis, septic shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow transplantation, burns, pregnancy, major surgery/trauma or adult
                                                                                                                                       diagnosis/prevention) of stroke, myocardial infarction, after venous

The variant protein C has an increased resistance to activation by e.g. human plasma and alpha-1 cantitrypsin. The conjugates have an increased in vivo half-life, increased serum half-life, increased resistant to inhibitors, reduced renal clearance, reduced immunogenicity and/or increased bioavailability. The conjugate offers a number of advantages over the currently available APC products, including longer duration between injections, available administration of less protein, and fewer side effects. Moreover, a reduced anticoagulant activity is beneficial to reduce the risk of bleeding while maintaining the antiinflammatory activity of APC (activated protein C) conjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is cloated on chromosome 2q13-q14. Human Protein C zymogen protein mutant D172N/K174T.

23-AUG-2002

(first entry)

Human; Protein C; N-glycosylation; APC; activated protein C; zymogen; serum half-life; chromosome 2q13-q14; stroke; myocardial infarction; after venous thrombosis; disseminated intravascular coagulation; DIC; sepsis; septic shock; embolism; pulmonary embolism; burn; bone marrow transplantation; major surgery; trauma; ARDS; adult respiratory distress syndrome; alpha-1 antitrypsin; mutant; mutein. pregnancy; coagulant;

Homo sapiens

The invention relates to a conjugate (I) comprising at least one non-
CC polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attached to
CA a protein C polypeptide comprising an amino acid sequence which differs
CC from that of a parent protein C polypeptide (III) in at least one
CC introduced and/or at least one removed amino acid residue comprising an
CC attachment group for the non-polypeptide (III) in at least one
CC slte). Also included are (I) a variant (IV) of (III) comprising an
CC slte). Also included are (I) a variant (IV) of (III) comprising
CC 25% of its side group exposed to the surface, with the proviso that the
CC substitution is not Mnz4SSer/Ala/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/
CC His/Lys/Arg/Asn/Asp/Glu/Gly/Gln; (2) a mucleotide sequence (V) encoding
CC (IV); (3) an expression vector (VI) comprising (V); (4) a host cell (VII)
CC comprising (V) or (VI); (5) increasing (M2) the functional in vivo half-
CC conjugates, variants and protein C proteins are useful as medicaments,
CC diagnosis/prevention) of stroke, myocardial infarction, after venous
CC thrombosis, disseminated intravascular coagulation (DIC), sepsis, septic
CC shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow
CC transplantation, burns, pregnancy, major surgery/trauma or adult
CC respiratory distress syndrome (ARDS). The variant protein C has an
CC antitrypsin. The conjugates have an increased in vivo half-life,
CC increased serum half-life, increased resistant to inhibitors, reduced
CC the conjugate offers a number of advantages over the currently available
CC ARC products, including longer duration between injections.
                                                                                               APC products, including longer duration between injections, administration of less protein, and fewer side effects. Moreover, a reduced anticoagulant activity is beneficial reduce the risk of bleeding while maintaining the antinflammatory activity of APC (activated protein C) conjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel conjugate useful for treating or preventing septic shock, stroke and myocardial infarction, comprises non-polypeptide group covalently attached to protein C polypeptide comprising an attachment group.
located on chromosome 2q13-q14. The present sequence represents a zymogen protein C variant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim

                                                                                                                             8
                                                                                                                                                                                                                                                                                                                                                                                                 thrombosis, disseminated intravascular coagulation (DIC), sepsis, septic CC shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow CC transplantation, burns, pregnancy, major surgery/trauma or adult respiratory distress syndrome (ARDS). The variant protein C has an increased resistance to activation by e.g. human plasma and alpha-1 cc antitrypsin. The conjugates have an increased in vivo half-life, increased resistant to inhibitors, reduced cc increased serum half-life, increased resistant to inhibitors, reduced cc remal clearance, reduced immunogenicity and/or increased bioavailability. The conjugate offers a number of advantages over the currently available capc products, including longer duration between injections, capc products, including longer duration between injections, capc reduced anticoagulant activity is beneficial to reduce the risk of bleeding while maintaining the antiinflammatory activity of APC (activated protein C) conjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  cc attachment group for the non-polypeptide group (e.g. an N-glycosylation cc site). Also included are (1) a variant (IV) of (III) comprising a substitution in a position (P) where (P) is an amino acid with at least cc substitution in a position to the surface, with the proviso that the cubstitution is not Thr245Ser/Ala/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln, (Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln, (2) a nucleotide sequence (V) encoding (C His/Lys/Arg/Asn/Asp/Glu/Gly/Gln, (2) a nucleotide sequence (V) encoding (C (IV); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) comprising (V); (4) a host cell (VII) (C comprising (V) or (VI); (5) increasing (M2) the functional in vivo half-cc or the serum half-life of a parent protein ( polypeptide. The CC conjugates, variants and protein C proteins are useful as medicaments, C and in the manufacture of medicaments for the treatment (and diagnosis/prevention) of stroke, myocardial infarction, after venous controls are capacitated and controls are capacitated.
                                                                                                                                                                               Matches 417;
                                                                                                                                                                                                       Query Match
